EDUCATION

Walchand College of Engineering

B.Tech in Information Technology; CGPA: 8.31/10.0

July 2021 – July 2025

Sangli, India

EXPERIENCE

UBS Business Solutions

Software Developer

August 2025 – Present

Pune, India

- **Full Stack Development:** Developed production banking features using React.js, TypeScript, SCSS, Java, and Spring Boot, integrating responsive UIs with RESTful backend services in an Agile team.
- **Backend & Testing:** Built and optimized REST APIs and database queries, and implemented unit/integration tests using JUnit, Mockito, Vitest, and Jest to improve reliability and reduce regressions.
- **AI-Assisted Tooling:** Architected internal AI developer tooling as part of “Intelligent Scripting,” provisioning role-based AI agents, skills, and instruction sets to improve employee productivity.
- **Collaboration & Engagement:** Actively participated in Scrum ceremonies and cross-functional discussions while engaging in employee forums and cultural initiatives to strengthen collaboration and team culture.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL

Frontend: React.js, TypeScript, HTML, CSS, SCSS, ES6, Figma

Backend: Spring Boot, Node.js, FastAPI, FastMCP

Testing: JUnit, Mockito, Vitest, Jest

AI/ML: LLMs, RAG, Vector Databases, MCP, AI Agent/Skill Customization

Tools: Git, GitLab, Postman

Fundamentals: Data Structures & Algorithms, Operating Systems, DBMS

PROJECTS

RemediFlow – Automated Vulnerability Remediation Platform:

- A multi-tool remediation platform integrating 3 security and code quality tools like NexusIQ, SonarQube, and Fortify (VM15) to automatically detect and fix vulnerabilities across GitLab projects.
- Engineered a Python-based auto-remediation engine that supports and parses 2 dependency ecosystem NexusIQ vulnerability reports from `pom.xml/package.json` and regenerates dependency files with resolved, user-selectable versions.
- Integrated GitLab API/MCP to auto-create merge requests for remediated code, enabling a human-in-the-loop review and merge workflow.
- **Tech Stack:** Python, GitLab API, GitLab MCP, NexusIQ API, SonarQube API, Fortify

CodeWithMe – Real-Time Collaborative Coding Platform [[GitHub](#)]:

- A real-time collaboration platform combining synchronized code editor, video calling, and whiteboard into a single application, supporting multiple concurrent users.
- Implemented real-time multi-user synchronization for code editing and whiteboard drawing using Socket.io, ensuring low-latency updates across all connected clients.
- Crafted a responsive UI with React.js and used MongoDB for persistent storage of session and user data.
- **Tech Stack:** React.js, Socket.io, MongoDB, Node.js

HONORS AND AWARDS

- Recognized as a top 5% student and awarded the Tuition Fee Waiver Scheme (TFWS) Scholarship for exceptional academic performance
- Secured 4th place in CODECRUSH, a coding competition organized by SAIT
- Captained the district-level cricket team to a runner-up finish in a 10+ team district tournament
